

Archive Email

## BusinessMail Cloud Email Archiving

Despite the rise of social and mobile media, email still remains the de facto business messaging tool of choice. Yet its use is not without problems. Email is largely uncontrolled and unstructured information and yet it contains vital business information, much of it company confidential.

Simply backing up and storing email is not enough. It requires indexing and classification to become manageable and to minimise risk and inefficiency.

BusinessMail Archiving is a cloud based email archiving solution that addresses the three main challenges of email usage —regulatory compliance, storage and internal policy management —without the associated hassles of managing and maintaining an archiving system in house.

### BusinessMail Archiving

The Archiving service allows users to decide, at a policy level, what mail requires archiving and who has access to the mail. This can be simply set to archive all mail to or from a domain, or it could be applied to individual users or groups.

In addition to deciding what mail is to be archived, access levels can be set to restrict access to the mail archive.

These access rights can range from providing all users with easy access to their archives through the standard mail interface, through to only allowing specific authorised users to view the archived mail. No mail can be deleted from the archive.

All mail archived is encrypted to ensure it can be proved, forensically if required, that the mail has not been tampered with. In addition all mail is copied to multiple geographically diverse locations to ensure it is always available.

### Benefits of BusinessMail Archiving

#### Stay Compliant

BusinessMail Archiving captures, indexes and archives all compliance related data ensuring you remain compliant whilst reducing risk of litigation. Without an effective Archiving system, you are searching for the proverbial 'Needle in a Haystack', leaving you exposed to non compliance and regulatory issues.

### **Reduce Storage Costs**

Email consumes huge amounts of an organisation's storage. As the volume of mail increases so does the storage requirement. Moving email archiving to the cloud not only frees up the corporate network but does so at a reduced cost compared with in house solutions. BusinessMail offers unique and innovative features to aid storage reduction such as de-duplication.

### **Stay Secure & In Business**

BusinessMail Archive ensures that your data is secure and protected. Individual mailboxes are not designed with security in mind, and yet they contain sensitive and vital data, much of it critical to your day to day operations. With cloud based, off site, archiving you can set and enforce restrictive local mailbox policies ensuring that you remain in control of your data at all times even if you suffer a potentially harmful situation such as the theft of a company laptop.

### **eDiscovery**

BusinessMail Cloud Archiving provides advanced litigation support features such as message tagging, checksum validation, pathway analysis, authenticity verification all designed to assist and protect you in any potential legal disputes.

### **Network Performance Optimisation**

BusinessMail Archive policy setting can increase your network's performance by .

### **Disaster Recovery**

In the event of a disaster where your current mail service is offline the cloud interface provided as part of the BusinessMail Archive service can be switched to a full mail service. This will ensure there will be no interruption to your mail service while your mail platform is restored.

### **Full Automation**

Once the mail is received by the BusinessEmail archiving system it is encrypted and written to a secure mail store. Each item of mail is written to three separate data stores each with separate storage, networking and power to ensure no data can be lost or tampered with. If required the data can also be written to secure mail stores in a separate geographical location.

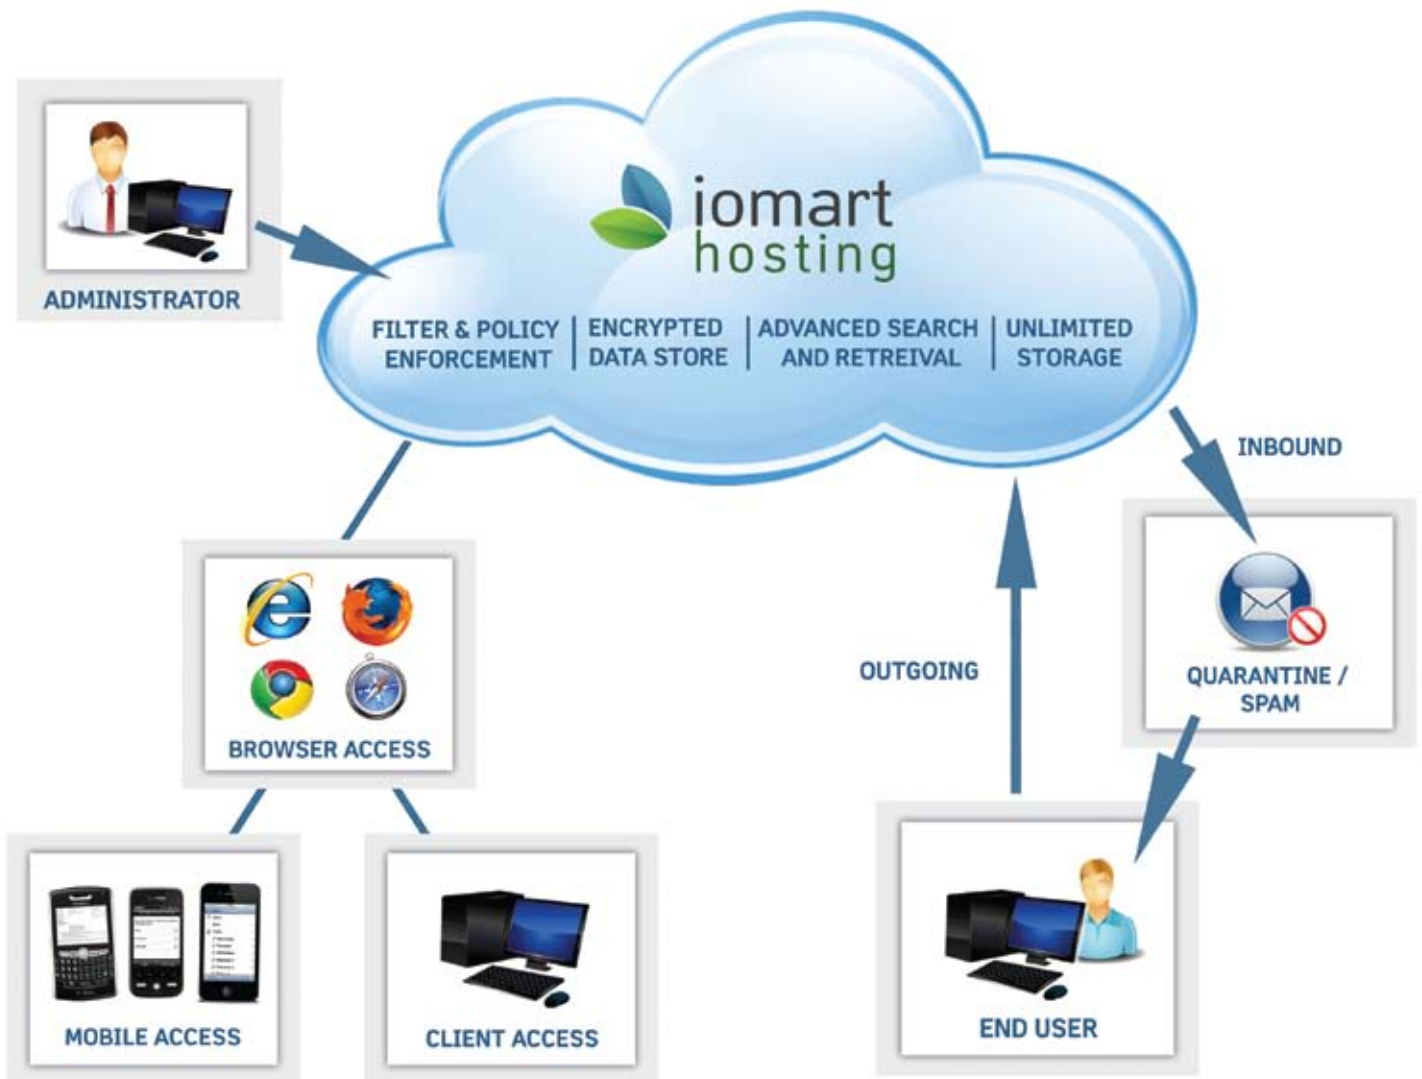

### **Increased Productivity**

Email becomes the business tool it was always meant to be. End users no longer need to create their own storage folders, worry about deleting or storing email or suffer from over loaded mail boxes. Finding old messages is simple with BusinessMail's retrieval system.

## BusinessMail Archive Features at a Glance

Unlimited Mailbox Sizing	✓
Outlook Access	✓
Drag and drop	✓
Near real-time search	✓
Anywhere Anytime Access	✓
Mailbox buffering in event of Mail System failure	✓
Mail copied prior to end user delivery	✓
